Spanish Driving License (Type B)

PROFESSIONAL SUMMARY

Results-driven Software Developer with a strong computer systems foundation and hands-on, specialized experience across the .NET ecosystem and SQL Server database engineering. Skilled in designing and building robust desktop and web applications, developing smart, asynchronous, and data-driven solutions, and delivering full-stack functionality from database architecture through user-facing interfaces. Recently built and deployed ContractMind, an AI-powered contract analysis platform (OpenAI, OCR, JWT), and expanded into containerization and CI/CD, packaging full-stack applications with Docker and automating build-and-deploy pipelines with GitHub Actions. Proven ability to progress from focused back-end development into full-stack ownership while collaborating effectively within distributed development teams. Fluent in Arabic and Spanish, with a solid technical command of English.

TECHNICAL SKILLS

Languages: C#, TypeScript, JavaScript, T-SQL, C++, HTML5, CSS3
Frameworks & Backend: .NET / .NET Core, ASP.NET Core MVC, Web API (REST), JWT Authentication, Angular 17+, WinForms, ADO.NET
DevOps & Containerization: Docker, Dockerfile (multi-stage builds), Docker Compose, Docker Hub, CI/CD Pipelines (GitHub Actions), Netlify, IIS hosting (MonsterASP.NET), currently building cloud deployment skills with Microsoft Azure
AI & Agents: Semantic Kernel, AI Agent Development & Integration, OpenAI API Integration, OCR (Tesseract)
Databases & Architecture: SQL Server, Stored Procedures, OOP/SOLID Principles, N-Tier Architecture, LINQ
Tools & Technologies: Visual Studio, VS Code, SQL Server Management Studio (SSMS), Git, GitHub

PROFESSIONAL EXPERIENCE

Desktop Application & Database Developer | Law Firm | 2022 – 2023

- Developed and deployed custom desktop applications using C# to streamline internal administrative and operational workflows for employees.
- Designed and managed specialized database solutions to facilitate rapid access to client data and transaction histories, significantly boosting efficiency.
- Automated key inter-departmental processes, resulting in a measurable increase in collaboration and faster case completion times.

FREELANCE & PERSONAL PROJECTS

ContractMind Enterprise – AI-Powered Legal Contract Analysis Platform | Personal Project | 2026
Code: github.com/maryam-alobaidi/ContractMind-Enterprise | Live demo: contractmind-ai-intelligent.netlify.app
Demo access: maryamalobaidi108@gmail.com / Password: 12345678

- Built a full-stack legal-tech platform that analyzes contracts with AI: users upload PDF or DOCX contracts (including scanned PDFs) and receive an automatic summary, a risk score, and an interactive chat to ask questions about each contract.
- Developed the ASP.NET Core Web API in an N-Tier architecture (API, BLL, DAL, Models) with ADO.NET and 25 SQL Server stored procedures, secured with JWT authentication, password hashing, role claims, and an email-based password-reset flow (SMTP).
- Integrated the OpenAI API for multilingual (Arabic/English) contract summarization, risk scoring and Q&A, masking sensitive personal data before sending text to the AI service.
- Built a document-processing pipeline with PdfPig and OpenXML for text extraction, and Tesseract OCR with Pdfium (parallel page processing) as a fallback for scanned Arabic documents.
- Added an audit-log module that records user actions (upload, delete, AI chat), plus CORS configuration and OpenAPI documentation with Scalar.
- Created the Angular frontend (TypeScript, standalone components, Signals) with login, contract management, AI chat, and light/dark themes.
- Deployed to production: Angular on Netlify with continuous deployment from GitHub, and the API with its SQL Server database on MonsterASP.NET over HTTPS (Let's Encrypt); also containerized with Docker.

Vantage – Multi-Functional Coworking Platform | Freelance Project | 2026
Code: github.com/maryam-alobaidi/CoworkingSpace-FullStack

- Developed a comprehensive full-stack booking platform leveraging Angular 17+ (Standalone Components, Signals) for a reactive frontend and ASP.NET Core Web API for a secure backend.
- Implemented a robust 3-Tier Architecture in the backend with asynchronous programming, custom models, and optimized SQL Server stored procedures for high-performance data processing.
- Integrated Stripe Checkout API with advanced bulk-ticket processing loops, secure transaction tracking, and dynamic multi-status payment confirmation workflows.
- Built an automated, asynchronous in-app notification system utilizing Angular Signals for real-time reactive navbar UI updates.

- Designed and integrated an AI Agent using Semantic Kernel to extend platform functionality with intelligent, automated assistance.
- Containerized the full stack (Angular frontend, ASP.NET Core Web API, SQL Server) with Docker and Docker Compose, and set up a GitHub Actions CI/CD pipeline to automatically build and publish images to Docker Hub on every push.

Full-Stack Smart Inventory System | Freelance Project | 2026
Code: github.com/maryam-alobaidi/Smart-Inventory-System-fullStack
- Developed a full-stack Smart Inventory System with an Angular SPA frontend and an N-Tier .NET Web API backend.
- Implemented asynchronous programming and generic data access to optimize database query performance by 35%.
- Dockerized the frontend and backend services and orchestrated them with Docker Compose alongside a SQL Server container, including an automated database-initialization service.
- Built a CI/CD pipeline with GitHub Actions to automatically build Docker images and publish them to Docker Hub on every commit to main.

Hotel Management System (HotelManagement.web) | Personal Project | 2025
Code: github.com/maryam-alobaidi/HotelManagement.Web
- Developed the entire full-stack application following a 3-Tier Architecture pattern.
- Streamlined key hotel operations (reservations, room management) utilizing ASP.NET Core MVC for robust backend logic and SQL Server for scalable data management.

Code Generator System | Freelance Project | 2024
Code: github.com/maryam-alobaidi/CodeGenerator
- Developed a backend and database code generation tool using C# and T-SQL.
- Reduced development time by 40% through automation of database schema creation, stored procedure generation, and CRUD operations.

Driving & Vehicle License Department (DVLD) | Personal Project | 2024
Code: github.com/maryam-alobaidi/ProjectDriverGeneral
- Designed a robust desktop application to efficiently manage vehicle registrations and driving licenses using .NET Framework (C#), WinForms, SQL Server, and ADO.NET.

EDUCATION

Bachelor of Computer Science | University of Baghdad
Diploma in Computer Systems | Technical University

CERTIFICATIONS

Software Developer – Fundamentals & Pre-Specialization | IT Academy (Barcelona Activa) | May 2026
- Successfully cleared screening examinations and intensive foundational programming assessments; selected to transition into advanced full-time specializations.

Comprehensive Backend, Desktop, and Web Development | Programming Advices Platform | 2023 – Present
- In-depth study of C# and C++ fundamentals, OOP, Data Structures, Algorithms, WinForms, and advanced SQL Server engineering.

Professionalism in Microinformatics Systems (Certificado de Profesionalidad) | The Corner Centre | 2019
- Official technical proficiency certification covering advanced system maintenance, network administration, software deployment, and infrastructure troubleshooting.

VOLUNTEER EXPERIENCE

Computer Instructor | Punt Òmnia La Pau | 2023 – 2024
- Designed and delivered core computer literacy curricula to diverse community members, simplifying complex technical concepts related to operating system essentials.

LANGUAGES
